PROFILE

Software engineer focused on process automation, system stability, and AI-driven ITIL/ITSM tools for infrastructure. Experience includes Red Hat Insights and Lightspeed, vector-DB knowledge bases trained on tickets and resolutions, AI self-healing with Ansible playbook generation, AI Hub web tooling, DevSecOps, and automation for enterprise server environments up to 14,000 machines.

SKILLS

AI and ML	Red Hat Insights, Red Hat Lightspeed, Vector databases, Ticket-resolution knowledge bases, Ansible playbook generation, Self-healing remediation, Classification, Regression, Gradient Random Forests, Machine Learning, RAG, SVM, LLM, Transformers
Platform Operations	ITIL/ITSM development, ServiceNow automation, Incident resolution, Platform upgrades, Vendor support, Developer enablement, Role grant/revoke automation, Template libraries
Cloud and Infrastructure	Ansible, Ansible Automation Platform, Red Hat OpenShift, Google Cloud, Microsoft Azure, Terraform, Helm, Kubernetes, Docker, Podman, RHEL, Windows Server, Unix, Linux, Solaris, LDAP, Active Directory
DevOps and CI/CD	Jenkins, Cloud Jenkins, GitHub, GitHub Actions, Custom GitHub Actions, Reusable workflow templates, JFrog Artifactory, Nexus, Red Hat Quay, Azure DevOps, TeamCity, UrbanCode Deploy, SonarQube, Fortify, ServiceNow, Sample CI/CD pipelines, Weekly smoke-test pipelines
Languages	Python, Java, C#, .NET, PHP, Ruby, Perl, TypeScript, JavaScript, Lisp, Racket, Prolog, Bash, PowerShell, HTML/CSS

EXPERIENCE

Senior Automation Engineer - Commerzbank AG

Feb 2025 - Present

Prague, Czech Republic

- Provide and maintain ITIL/ITSM automation for bank-wide infrastructure users, turning repetitive operational work into reusable workflows and APIs.
- Automate server lifecycle management for a growing estate from roughly 6,000 to 14,000 RHEL, Solaris, and Windows servers.
- Build and support 3 active build APIs, around 12 pipelines, 40+ repositories, and automation used by 2 teams and 5,000-6,000 IT users across the bank.
- Develop AI self-healing infrastructure with vector databases trained on historical tickets and resolutions, generating Ansible playbooks for remediation such as certificate renewal and memory extension.
- Integrate Red Hat Insights and Red Hat Lightspeed workflows for server health, remediation reporting, and operational intelligence.

Developer / DevOps Engineer - DHL

Nov 2022 - Jan 2025

Prague, Czech Republic

DevOps Engineer (Jul 2024 - Jan 2025)

- Specialized in DHL's DevSecOps Platform as administrator and developer: maintenance, upgrades, monitoring, incident resolution, vendor support, and developer enablement for Jenkins, Cloud Jenkins, GitHub, GitHub Actions, JFrog Artifactory, SonarQube, Nexus, Red Hat Quay, and Azure DevOps.
- Built sample build, test, run, and deploy pipelines for Java (Maven, Ant, Gradle), Python (pip, Poetry), C#/.NET, Ruby, Perl, Docker builds, and JavaScript builds with npm and Yarn.
- Created reusable GitHub Actions for deployments to GCP, OpenShift, Kubernetes, and Docker, automatic Artifactory deployments, image pushes to registries, SonarQube and Fortify scans, and weekly smoke-test pipelines.
- Supported developers with templates, advice, platform examples, and automation for role granting and revocation.
- Built monitoring and alerting workflows with Zabbix and Microsoft Teams, plus DynaTrace, Elastic, ServiceNow, internal reporting, and change-management automation.
- Migrated and modernized environments from RHEL 7 to RHEL 9.

Software Engineer (Nov 2022 - Jul 2024)

- Developed, migrated, and maintained Developer Portal for more than 500,000 external customers as a full-stack PHP Drupal 9 and React engineer.
- Migrated Developer Portal from a custom docker-compose deployment to Kubernetes on GCP, combining product development with platform engineering.
- Built AI Hub website as an internal AI-facing web platform for discovery and enablement.

Previous: Developer - part-time - Willz | Aug 2018 - Nov 2019 | Moscow, Russia | Developed a CRM system using Django for a car leasing company operating in Moscow.

SELECTED PROJECTS

Automated Server Lifecycle Management | Commerzbank AG

- Designed automated server lifecycle management from scratch for an estate growing from roughly 6,000 to 14,000 RHEL, Solaris, and Windows machines.
- Built operational lifecycle actions, health checks, and repeatable workflows behind 3 active build APIs, around 12 pipelines, and 40+ repositories.

Tech: Ansible Automation Platform, RHEL, Solaris, Windows Server, Red Hat Insights, Red Hat Lightspeed, ITIL/ITSM

AI Self-Healing Infrastructure | Commerzbank AG

- Built an AI self-healing approach around a vector database trained on existing tickets and their resolutions.
- Generated Ansible playbooks for remediation scenarios such as certificate renewal, memory extension, and recurring machine-healing tasks.

Tech: Vector DB, RAG, LLM, Ansible Playbooks, Red Hat Insights, Red Hat Lightspeed, Self-healing

DevSecOps Platform Engineering | DHL

- Owned platform administration and development for Jenkins, Cloud Jenkins, GitHub, GitHub Actions, JFrog Artifactory, SonarQube, Nexus, Red Hat Quay, and Azure DevOps.
- Handled upgrades, monitoring, incidents, vendor support, developer templates, advice, and automation for role granting and revocation.

Tech: Jenkins, Cloud Jenkins, GitHub Actions, JFrog Artifactory, SonarQube, Fortify, Nexus, Red Hat Quay, Azure DevOps, OpenShift, GCP

AI Hub Website | DHL

- Built an internal AI Hub website to make AI tooling and AI-related resources easier to discover and use.
- Combined web development with AI enablement work inside an enterprise platform context.

Tech: AI, Web development, Developer platforms

Internal Reporting Automation | DHL

- Built internal automation tools for reporting, operational visibility, and platform health.
- Turned recurring reporting work into repeatable internal tooling for DevSecOps and engineering teams.

Tech: Automation, Reporting, Developer platforms

EDUCATION

Czech Technical University - Bachelor Program, Computer Science | Sept 2019 - Present

Radboud University - Exchange, Computer Science | Grade: B | the Netherlands, Nijmegen, 2021
